ABSTRACT

This handbook provides educators with strategies and ideas for incorporating multimedia projects into the curriculum for grades 4-12. With a focus on student learning, the authors show how to plan and implement multimedia activities and engage students in expressing themselves through a variety of media. Using the DDD-E model (Decide, Design, Develop, Evaluate), educators learn how to select and plan multimedia projects, use presentation and development tools, manage graphics, audio, animation, and digital video, create a Web page, and evaluate student work. In addition, numerous examples of projects involving such tools as PowerPoint, HyperStudio, and HTML are offered. Project suggestions include a scenario, an overview, topics, and reproducible worksheets, and can easily be adapted to different grade levels. Contains a glossary and an index. (MES)
